WORK EXPERIENCE

Software Engineering Lead — LMX Labs

Jun 2026 – Present

- Serve as sole technical lead for LMX Labs' product ecosystem, directing architecture and engineering execution across two live platforms — Saturdays and DineGuru — while managing a student engineering team.
- End-to-end architected and developed [Saturdays](#), a consumer food-ordering marketplace owning discovery, ordering, and payments, and [DineGuru](#), a restaurant operations platform handling inventory, kitchen ticketing, and billing, integrated via REST APIs and webhooks for real-time sync.

Web Developer Intern — GovernAI

May 2026 – Jul 2026

- Designed and built [Research Atlas](#), an open-source AI research discovery platform contributed on behalf of GovernAI, unifying papers, repositories, and governance resources into one semantic search experience (React/TypeScript, Python/FastAPI, ChromaDB vector search).
- Owned end-to-end frontend for [GovernAI Studio](#), an AI-governance training simulator, and contributed backend features within its Django/Celery/RAG pipeline; shipped GovernAI's corporate website with an SEO strategy that improved organic visibility.

Web Developer — VUBS Corporation (BASF Authorized Channel Partner)

Dec 2025 – Feb 2026

- Owned full-cycle development as sole engineer — gathering requirements, architecting the information structure, and building a responsive, performance-optimized corporate website end-to-end (React, Vite, TailwindCSS, React Router) within a 3-month solo timeline.
- Implemented a technical SEO strategy that outranked established industry competitors in organic search rankings for key product categories.

PROJECTS

[Research Atlas](#) — Open-Source AI Research Platform (GovernAI Contribution)

- Built and open-sourced a full-stack AI research platform on behalf of GovernAI, unifying papers, repositories, and governance resources into one semantic search experience (React/TypeScript, Python/FastAPI).
- Implemented semantic retrieval via ChromaDB vector search and Sentence-Transformer embeddings across OpenAlex and GitHub, ranked by a custom relevance score.

[GovernAI Studio](#) — AI Governance Training Simulator

- Owned end-to-end frontend design and development, delivering a persona-driven training interface for governance and compliance simulation scenarios.
- Contributed backend functionality within a Django, Celery, and hybrid RAG + LLM inference pipeline, extending core simulator logic.

[AI-Based Content Recommendation System](#) — IIT Ropar Capstone

- Engineered a transformer-based SASRec sequential recommendation model (25M parameters), achieving 98.47% AUC-ROC and 98.23% Hit Rate@10.
- Deployed end-to-end with automated data-ingestion pipelines, Docker-based real-time prediction REST APIs, and a React frontend consuming live predictions.

TECHNICAL SKILLS

Languages & Web: Python, Java, C++, TypeScript, JavaScript, React, Node.js, HTML5, CSS3, TailwindCSS

Infrastructure & AI/ML: REST APIs, Docker, Git/GitHub, SQL, FastAPI, PyTorch, TensorFlow, Hugging Face Transformers, LangChain, RAG, LoRA/QLoRA

Core CS: Data Structures & Algorithms, OOP, Computer Architecture

EDUCATION

B.Tech, Computer Engineering — Vellore Institute of Technology (VIT) | GPA: 8.17/10

2024 – 2028

12th (CBSE) — Bhagwan Mahavir International School | 75%

10th (CBSE) — Delhi Public School, Surat | 83.8%

AWARDS & CERTIFICATIONS

- Major Degree in Artificial Intelligence — Indian Institute of Technology (IIT), Ropar (2024 – 2026)
- AIR-140, National Entrepreneurship Challenge — IIT Bombay (2025)
- Shortlisted: Smart India Hackathon 2025
- Shortlisted: EY Techathon 2025
- Microsoft Software Development Essentials
